*1 Consult us about dynamic load and input response. Measure the output voltage by using the average mode of the tester to deal with the burst operation at low (lo=0~20%typ) load.
 *2 This is the result of measurement of the testing board with capacitors of 47μF and 0.1μF placed at 150 mm from the output terminals by a 20MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-GikenRM104.
 When the load factor is low (lo=0~20%typ), the switching power loss is reduced by burst operation, which will cause ripple noise to go beyond the specifications.
 *3 Output power derating is required. Refer to "Derating"
 *4 Please contact us about another class. When two or more units are operating it may not comply with the IEC61000-3-2. Please contact us for details.

*5 Dimensions below PCB are not included.
 *6 Consult us about details.
 *7 The listed options may affect the published standard specifications. Please contact us for detailed product specifications and safety approvals.
 * All parameters not specially mentioned are measured at ACIN 230V, rated load and 25°C of ambient temperature.
 * Do not use the power supply in overcurrent conditions or in unspecified input voltage ranges. Otherwise the internal components may be damaged.
 * Parallel operation is not possible with this model.
 * Acoustic noise may be heard from the power supply when used for pulse load.

Assembling and Installation Method

■ When the power supply is used with natural convection cooling, the standard mounting position is horizontal.

■ AC voltage exists on the primary side. Therefore, in order to prevent electric shock, or to meet the leakage current requirements of the safety standard, you need to ensure the proper insulation distance.

Mounting screw

■ The mounting screws should be M3. The hatched area indicates the proper area for mounting hardware.

● **UMA30F, UMA60F**

* Recommend to electrically connect FG to metal chassis for reducing noise.

● **UMA120F**

* Recommend to electrically connect FG to metal chassis for reducing noise.

- The mounting screws should be M3.
The hatched area indicates the proper area for mounting hardware.
- This power supply is manufactured by SMD technology.
Stress to the PCB such as twisting or bending may cause damage to the unit, please handle with care.

Derating

Derating curve for input voltage

UMA30F Ambient temperature derating curve at rated input

UMA30F-SN Ambient temperature derating curve at rated input

UMA60F Ambient temperature derating curve at rated input

UMA60F-SN Ambient temperature derating curve at rated input

UMA120F Ambient temperature derating curve at rated input

UMA120F-SN Ambient temperature derating curve at rated input

- The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply. Please consult us for more details.
- The shaded area is the derating required at start-up.
